Score = Σ (factor weight × proximity multiplier), capped at 100.

Each factor counts once, whatever the number of affected entities.

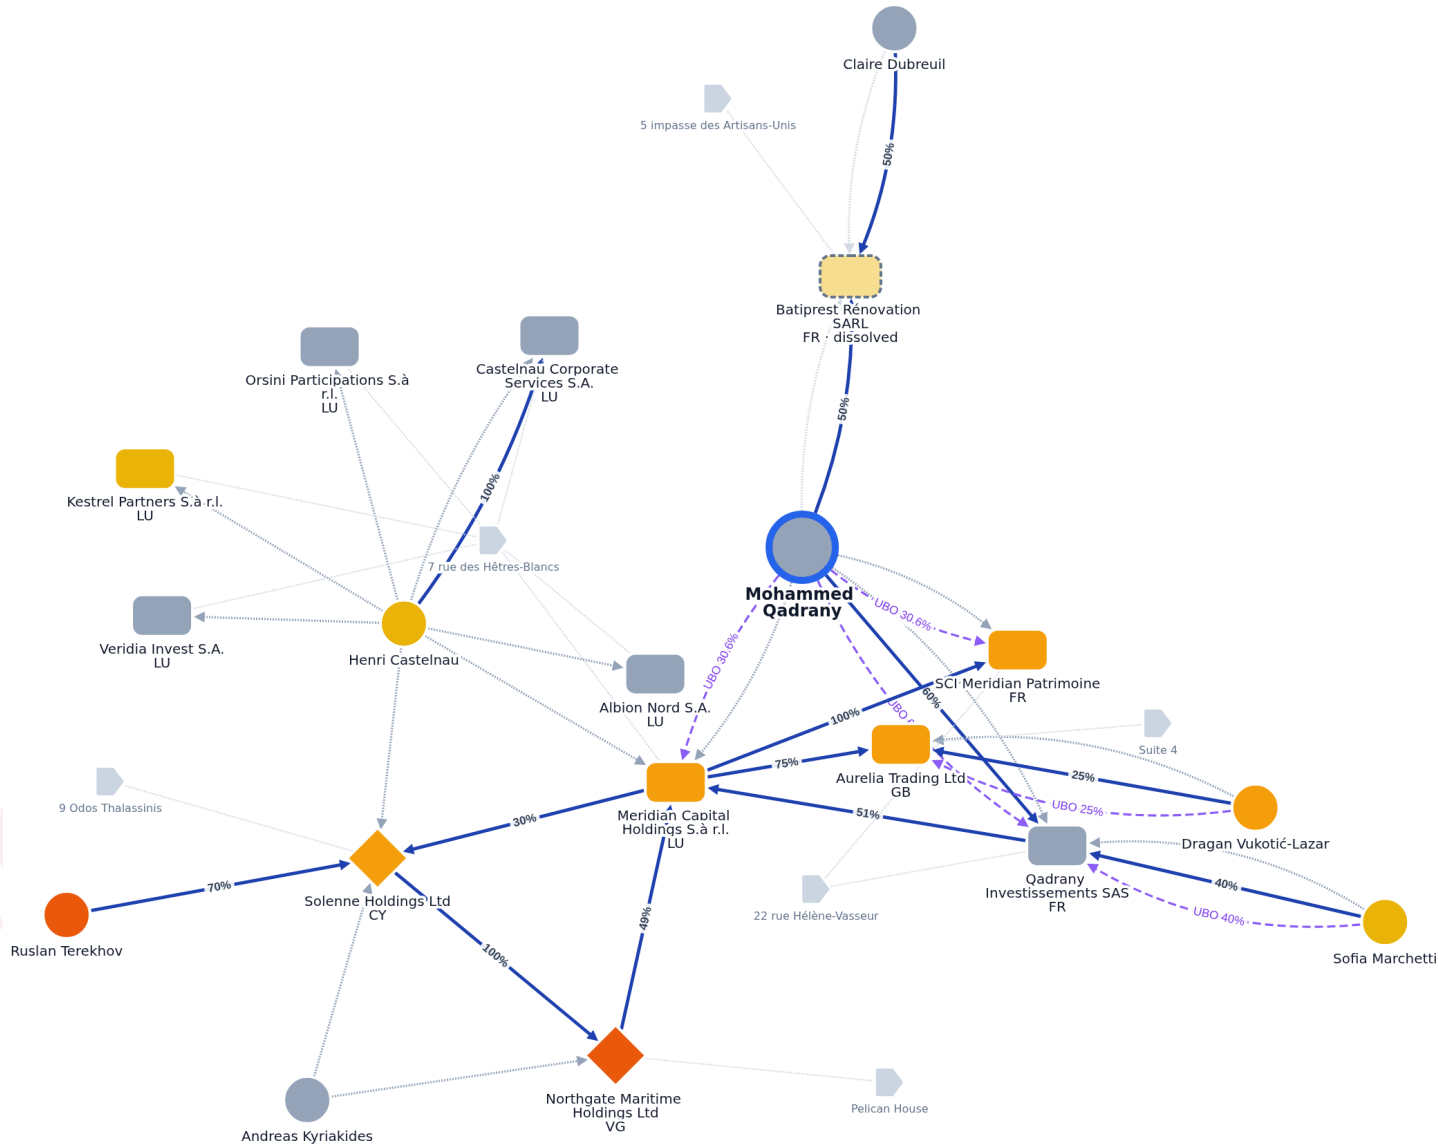

Proximity multiplier by distance to the subject: 0 hop(s) ×1.0, 1 hop(s) ×0.8, 2 hop(s) ×0.6, 3 hop(s) ×0.45, default hop(s) ×0.35

Screening hits ≥ 85% count as matches, 70–85% as possible matches, below are shown for review only.

Weights and thresholds: config/risk.yaml — jurisdiction lists: config/jurisdictions.yaml.

4. Ownership & control graph

Arrows point from the owner/officer to the company. Percentages are direct holdings. Node colour reflects the entity's own risk flags.
